PROFESSIONAL SUMMARY

BSc Computer Science graduate who turns scattered enterprise data into decisions people can act on. As a Product Analyst at SYSPRO, I build the cross-source data models, dashboards, and automations that connect product usage, customer feedback, and field assessment data into a single evidence base used to prioritize the roadmap. That work sits on a growing technical foundation in SQL, Python, and Microsoft Azure/Fabric, currently working toward the Fabric Data Engineer Associate (DP-700) certification. I bring a builder's instinct to product analytics: comfortable moving from a stakeholder's question straight through to the underlying data model and back with an answer.

EDUCATION

University of Cape Town

Bachelor of Science in Computer Science

Cape Town, South Africa

2023 – 2026

EXPERIENCE

Product Analyst

SYSPRO

Mar 2026 – Present

Sunninghill, South Africa

- Building the cross-source data model and dashboards that connect five product data sources (usage telemetry, product metrics, field assessment findings, support tickets, and customer suggestions) into a single evidence base for roadmap decisions
- Leading a review of Product Operations SOPs, documenting process gaps and proposed fixes for the department
- Drafting the quarterly Product Suggestions report and a holistic Field Assessment analysis across four product capability areas

PROJECTS

CodePulse | *C++, Flask, SQLite, Chart.js*

- Built a full-stack application with a C++ backend service, a Flask API layer, and a Chart.js dashboard for visualizing processed data
- Designed the SQLite schema and data access layer connecting the backend service to the reporting frontend

FarmYield Predictor | *Python, scikit-learn, pandas*

- Built a machine learning model to predict crop yield from historical agricultural data using scikit-learn
- Cleaned and engineered features from raw agricultural datasets using pandas

CERTIFICATIONS

Microsoft Certified: Azure Fundamentals (AZ-900), Microsoft, Feb 2026

Product Management Basics, Pendo.io, Aug 2026

TECHNICAL SKILLS

Languages: Python, SQL, T-SQL, C++

Data & Cloud: Microsoft Azure, Microsoft Fabric, Power BI, SQL Server, pandas, scikit-learn

Tools: Git, Flask, Excel, SYSPRO ERP
